PLUMBING & SANITARY WARE
HEATING SYSTEMS
GAS SERVICES
COMMERCIAL PIPEWORK
CHILLED WATER SYSTEMS

**MAKING PIPE
DREAMS REALITY**

From sleek washroom solutions to facilitation of instant hot and chilled water, our experienced in-house engineers know what's needed to precisely answer your brief.

We'll keep your pipes, gas appliances and heating systems in pristine working condition from first installation and throughout their life cycle.

KEEPING BUILDINGS GAS SAFE

> Gas Services

Unsafe gas appliances can put people at risk from gas leaks, fires and carbon monoxide poisoning. Building owners have a responsibility to keep their employees and visitors safe, and this is where we can help.

As Gas Safe Registered engineers, we're qualified to work with both natural gas and LPG systems, on appliances including boilers, fires, cookers and flues.

RELIABLE AND EFFICIENT WARMTH WHERE YOU NEED IT

> Heating Systems

With heating, it pays to be prepared, and not just in the winter months.

Heating systems and plant and boiler room planning and installation requires specialist knowledge. Our engineers have extensive experience working in large commercial, industrial and public premises. You can count on them to help you meet the heating requirements of your building and the people and objects within it year-round.

HIGH SPEC KITCHENS AND WASHROOMS

› Plumbing & Sanitary Ware

What does your sanitary ware say about your business? Essential to any building, it's crucial that your washrooms, kitchens and break out areas create a lasting impression with users for the right reasons.

We can help with decorative and functional sanitary ware, the supply and installation of hot, cold and chilled water taps, and provision of water treatment and filtration solutions.

CARING FOR COMPLEX PIPES

› Commercial Pipework

Installation of commercial gas, hot/cold services, compressed air and drainage can be intricate work.

Whether your project is new and requires design input and installation, or you'd like us to expand or alter an existing system, we are experts at providing large pipework solutions for all applications.

COOL AND COST-EFFECTIVE

› Chilled Water Systems

Commonly used in manufacturing to stabilise the temperature of raw materials during the processing stage, temperature-controlled water chillers are a cost-effective alternative to refrigerant-based cooling systems.

Highly trained by leading manufacturers, we can provide all the information and advice you need regarding chilled water technology, to ensure you end up with a suitable system for your needs.

TAPPED INTO YOUR NEEDS

If you just need plumbing and heating services, we'd be happy to help whatever the size of your requirement. But, as a multi-disciplinary M&E contractor with five specialist in-house divisions, we're equipped to cover all your project needs, including a dedicated aftercare service.

Reliable and efficient plumbing and heating systems to **build a sustainable business**

ENABLING CORE BUSINESS OPERATIONS

At the centre of every business are reliable and effective plumbing and heating systems.

Whether vital to your daily business processes, or more about ensuring your building is suitably heated and comfortable for your staff, we design, supply and install robust pipework, safe gas appliances and functional and aesthetically pleasing sanitary ware to ensure your continued business operations.

INVESTED IN YOUR SUCCESS

Working alongside fit-out companies, or directly with clients, our aim is the same for both - to make your professional life easier. When you choose to work with us you don't just get a subcontractor, you get access to a team that's as invested in the success of your project as you are.

WITH YOU FROM SPECIFICATION TO HANDOVER

Whether you're replacing outdated pipework and main central heating boilers, or completely kitting out a new build facility, when you invest in plumbing and heating systems you need to be confident they will suit the demands of your building and its users, now and long into the future.

If this is the first time you've dipped your toes into a plumbing and heating project and you don't know your combination from your condensing boilers, you're in luck. We'll share our knowledge and expertise without baffling you with jargon. If you already possess the knowledge required to specify your ideal solution, you can expect us to deliver on that specification to the highest standards.

Either way, we'll take the time to understand what you want to achieve and share our experience to ensure your resulting systems are fit for purpose.

Our **people love what they do**, so what they do is amazing

RECOGNITION WHERE IT'S DESERVED

When you work in a competitive industry, it doesn't pay to be modest. We've worked hard to attain a number of industry accreditations and partnership status with leading manufacturers, and we're not shy about showing this recognition off.

From achieving and retaining our place on the Gas Safe Register and demonstrating that we take health and safety seriously through our CHAS accreditation, to being a member of the Chartered Institute of Plumbing and Heating Engineering, these endorsements evidence the best-practice approach we bring to all areas of our work.

Ideal Boilers also recognise our commitment to quality and awarded us with their highest level of accreditation, allowing us to offer 12 years warranty on Ideal Vogue Max boilers.

EXPERIENCED TO DELIVER FOR ANY SECTOR

Whether you need a gas supply for commercial catering, chilled water for manufacturing processes or main central heating for an office, we have the expertise and experience to ensure a safe, fit for purpose installation for any type and size of premises.

Work with us for a
painless experience

“It’s a painless experience with 2Teck. When I approach them with a new tender, they are quick to respond with the relevant information and very detailed in their pricing. This detail is appreciated, and it also extends to other areas such as RAMS, test results and O&M information. I don’t have to chase them for any of it!”

Tom Molland,
OC Projects Ltd

“We have worked alongside 2Teck on a number of mechanical and electrical projects now, and once again they have delivered our requirements to a very high standard, whilst meeting our business-critical timescales and providing an extremely comfortable working environment for our tenants.”

Associate Director,
NorthWood Investors

“As a main contractor, Spectrum can call upon 2Teck to add value to our own offering. When we attend client meetings together, I am confident that I’m with specialists in their field. This expert knowledge is retained throughout a project, as 2Teck self-deliver all aspects, avoiding unnecessary layers of delegation and cost. This results in fewer headaches as projects progress.”

Dominic Williamson,
Spectrum

We're equipped to **do the job right**, first time and every time

WE'RE GAS SAFE, NOT SORRY

Safety is always front of mind for us, but it's particularly critical when it comes to gas works. All 2Teck plumbing and heating engineers are Gas Safe Registered, so we're legally able to work on all natural gas and LPG systems and appliances.

You can also count on our RAMS being precise and provided in good time, and our on-site conduct mindful, giving you reassurance that our safety standards are on par with yours.

100% 2TECK SELF-DELIVERY

Taking great pride in the work we put our name to, our self-delivery approach sits well with our clients for several reasons.

All our engineers are directly employed by 2Teck, which means we don't dilute control of the quality or add unnecessary layers of cost to your budget. You also know that everyone wearing a 2Teck uniform working on your premises is properly trained and has the relevant security checks.

TAP INTO OUR KNOWLEDGE

Our plumbing and heating engineers are specialists, and only work on plumbing and heating projects. Having them involved early in the project planning process will help ensure that the most suitable solution is specified, enhancing your system design and delivering efficiencies.

We're happy to join client meetings to share our knowledge, or contribute ideas and insight to proposals.

MINIMISING THE DRAIN ON YOUR TIME

When we ask clients what their main concerns are, we find most respond with budgeting and programme delivery. For the things we have direct control over – quotations, client communications, paperwork – we're responsive and exact.

And should things happen outside of our control, we're flexible and resourceful, so we'll help to find a solution that protects your budget, delivers on your KPIs and prevents unnecessary admin time on your side.

WE TAKE OUR RUBBISH WITH US

Plumbing isn't the cleanest of professions, but that doesn't mean we're careless with tidiness on site, or lax with our appearance.

When working in your building, we recognise that we represent you. It's why our uniforms are smart and clean, our vans are kitted out to the highest spec and we take our rubbish off-site when we leave. We don't believe clients should have to clean up after us.
